

VERSATILITY IS ONLY HALF THE STORY

Refreshed with our new cold-weather compound and treated with a brand-new tread design, the Hercules® Terra Trac® AT II is perfectly equipped to tackle harsh winter conditions with ease. And while Terra Trac AT II's 3PMS certification shines in the sleet and snow, its unique ability to deliver on any terrain makes this tire the all-around performance powerhouse that drivers demand and dealers love.

|| Terra Trac® AT II

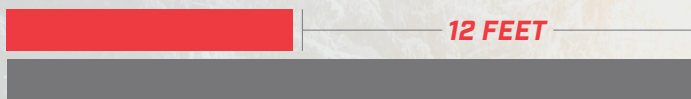

FEATURES & BENEFITS

1. To maximize road contact and provide peak peace-of-mind, Terra Trac® AT II is engineered with a proprietary cold-weather compound, to help your customers accelerate faster and stop shorter when it matters most.
2. Tusk grooves create a larger void for better all-around, all-terrain traction.
3. Stone ejector ribs in the outer circumferential grooves are uniquely designed to resist stone drilling.
4. Tapered steps and strategically placed angles in the center of the groove walls reduce stone retention.
5. Aggressive shoulder design with alternating scallops amplifies off-road traction and rugged looks.
6. Intermediate and center tread blocks are tied together in pairs for excellent tread block stability.
7. Heavy EKG siping creates a multitude of biting edges to promote all-weather traction while enhancing tread block stability for reliable handling.

The Terra Trac AT II || Split-second Reaction Reborn

SNOW BRAKING (FEET)

Stops **12 feet shorter** than the Falken AT3W in snow.

SNOW BRAKING (FEET)

Stops **7 feet shorter** than the Goodyear Trailrunner AT in snow.
